

2MM SPECIALIST RESCUE GLOVES

Designed specifically for the UK rescue services, these 2mm Neoprene Rescue Gloves are a versatile choice for rescue personnel, divers and watersports enthusiasts looking for reliable hand protection, grip and comfort in the water.

Made from flexible 2mm neoprene, the gloves provide lightweight thermal protection while maintaining good dexterity and freedom of movement. This makes them particularly well suited to warm-water diving and a wide range of watersports where flexibility and grip are important.

The palms and fingers feature durable Amara suede, providing enhanced grip when handling equipment, ropes and other items in wet conditions. A double-reinforced palm adds extra durability to high-wear areas, helping the gloves withstand regular use.

A secure Velcro wrist closure allows the fit to be adjusted for comfort and security while helping to reduce water flushing through the wrist. This helps improve warmth and comfort during extended periods in the water.

Originally developed for the requirements of the UK rescue services, these gloves are equally suited to recreational and professional divers.

FEATURES
