

AQUAPAC 359 CLASSIC PHONE

A case designed to fit your phone. The most trusted waterproof cases on the market, since 1983.

The waterproof case is made of polyurethane, stabilised by UV rays, which does not discolour in the sunlight. The seams are welded with high frequency to form a very strong bond and the flexible plastic casing allows you to handle all the buttons without any problem. The case stays soft and functional even in extreme cold.

FEATURES

- Seal protects and secures your phone from the elements
- Seams welded together with high-frequency radio waves, creating a super-strong bond
- The optically-clear LENZFLEX window is UV-stabilized (so it won't go yellow in the sun)
- Functional in extreme conditions, desert or arctic conditions
- Fingerprint Recognition (e.g. Touch ID) won't work through the Aquapac - you will have to enter your passcode
- Face Recognition (e.g. FaceID) software will work as normal
- Some phones have rather sharp edges. We recommend the use of a thin bumper case which will protect both phone and case
- 100% waterproof
- Talk and hear as normal
- Great photos and videos
- Touchscreens work normally
- Protection against water, dust, corrosion, sand and mud
- Lanyard included

Submersible - protected against continuous immersion to a depth of 10m (30')

PACKAGE SIZE:

260*130*20mm (10.2*5.1*0.8")
