

6.5MM SUPERVENT DIVE HOOD

Designed for cold water diving, the Northern Diver 6.5mm Supervent Dive Hood delivers exceptional warmth, comfort and performance for recreational, commercial, military and rescue divers.

Constructed from 6.5mm superstretch neoprene, it provides excellent insulation while offering the flexibility needed for unrestricted movement. Northern Diver's Supervent System automatically releases trapped air through a one-way valve at the crown, preventing air pockets and maintaining a comfortable fit throughout the dive.

The hood also features Ti-Ax® heat reflective technology, helping retain body heat in cold water, while smooth-skin neoprene face seals on the inside and outside minimise water ingress for improved thermal performance.

Finished with a durable MA heavy-duty stretch nylon outer coating, the Supervent Hood is built for demanding diving environments.

FEATURES

- 6.5mm premium superstretch neoprene construction.
 - One-way Supervent valve removes trapped air automatically.
 - Ti-Ax® heat reflective technology improves warmth.
 - Smooth-skin face seals on both the inside and outside.
 - Heavy-duty MA stretch nylon outer coating for increased durability.
 - Exceptional thermal protection for cold water diving.
 - Flexible anatomical fit for all-day comfort.
 - Compatible with both wetsuits and drysuits.
 - Designed for recreational, commercial, military and rescue divers.
 - Built to deliver long-lasting performance in demanding underwater environments.
- SIZES: S, M, L, XL
