

# PREDATOR FULL CUT HELMET

The Predator Full Cut Helmet offers excellent high-impact head protection, suitable for a range of water rescue and watersport applications.

This impressive, one-size-fits-all helmet features the Occipital Protuberance-hugging (OP-Hug) shape at the back of the head, for added protection in addition to a comfortable fit. The shell also drops below the ear, maximising protection for both the head and ears, plus ensuring helmet stability.

The shell itself is composed of high impact Ralvek® thermoplastic for increased rigidity, toughness and ultimately, protection. A closed-cell waterproof EVA foam inner provides high-impact protection and comfort, complete with an inner adjustable cradle to achieve the perfect fit.

Vent holes at the sides also provide an effective drainage and ventilation solution, in addition to facilitating good hearing.

Other features include an adjustable chin strap with top-quality webbing and release buckle, plus the helmet comes complete with custom fit pads.

Thanks to its range of impressive features and all-encompassing protection, the Predator Full Cut is an ideal choice for swift water rescue teams, and also those partaking in a range of water sports, such as – kayaking, canoeing, rafting, group river use and much more.

Certified EN:1385.
