

# BIO RANGER FINS

Bio Ranger Fin - Apollo are tough, light and compact military split fins that are suitable for long and short distance water operations, including counter terrorism, tactical operations, mine counter measures, search and rescue, and battle damage repair. Their size and low weight means that they are also suitable for helicopter and parachute insertions.

The rubber's flexibility gives powerful thrust, while reducing the risk of surface splashing. The comfortable foot pocket accommodates most military and amphibious footwear, for example jungle boots. Owing to the anti-slip high traction sole, these fins are also easy to walk in.

- Manufactured from 100% natural rubber (negatively buoyant)
- Dynamic split blade technology – reduces fatigue
- Stainless steel spring straps
- Comfortable foot pocket with anti-slip high traction sole
- Low magnetic permeability for EOD
- Boot size: M/L, L/XL
